Music Alive Live Wallpaper is a live wallpaper app for android phones and tablets. Watch your wallpaper come alive with bubbles and waves when you play any music.

App Link: [Android](#)

Reference Application – APSM

Built Android and iOS app for a nonprofit organization who provide publications, books, audios for free to its members. They also send out notifications to their members for any events coming up in future. Also built a dashboard application using AngularJS 2 to upload content.

App Link: [Android iOS Web](#)

e-commerce Application – The Pumpkin

Built Android and iOS app for an e-commerce application. The app uses Prestashop as backend and is totally native application. Both the apps use Google authentication framework and notifications framework. The applications consume both REST and SOAP requests and implement designs like modals, pop-overs, collection views and table list views.

App Link: [Android](#)

Web and Mobile Application – Non-profit organization

Built Android and iOS app for a non-profit organization. Also, migrated their existing web pages to AngularJS 2.0 framework based application. The backend is developed using Node.JS and are deployed onto AWS.

PROJECTS
